TURAB HASHMI (BSSE23002)

TOPIC: NAB

PROBLEM OVERVIEW:

In the previous assignment we have discussed the problem and the solution now in this interview In the previous assignment we have discussed the problem and the solution now in this interview we will see how that solution in the current website of NAB will be implemented, a thing to remember is that we are not proposing a website we are proposing changes to the existing website to tackle the problems. As, in our problem we see that the website of NAB is allowing the users to ask questions and know more about NAB plus even contact them in case of complaints, now we proposed that the organization should use an integrated system with which the delay in data processing, case management and the un-coordination between various departments will be handled(which was the main problem), that integrated system in short a data base should be connected to the website where the information on the case will be submitted consequently the problem of data retrieval and delay plus the un-coordination will be handled as

all the departments will have the same data and synced activities , and the biasness can be reduced by the fact that the website will contain a dashboard showing the roles and the cases of each investigator plus all the info will be secured as each user will be given a specific user identifier. Now, we will see how questions will be asked related to this modification in the existing website.

1. Establishing Customer or User Profile

Questions:

- **What are your key responsibilities? -> R1**
- **How is success measured? ->R2**

Expected Answers:

- “My responsibility is to handle case files, update them according by keeping in contact with the project progress and ensuring secure access to the files.”
- “The main focus is how quickly the work is completed. The fast transfer of data, with or without its security, is very important and is the success for me."

2. Assessing the Problem

.

Questions:

- **Why does this problem exist? ->R3**

Expected Answers:

- “The problem exists because while the current system lacks integration between departments, the issue goes beyond just delays and coordination. Each department operates with its own set of processes and data, which makes it challenging to foster collaboration. In fact, some departments might be resistant to a more centralized system, as they feel their independent workflows are more efficient. This reluctance to change, coupled with the lack of integration, makes it harder to synchronize efforts and leads to inefficiencies in the overall system."

3. Understanding the User Environment

Questions:

- **Who are the users? -> R4**
- **What is their educational background? -> R5**
- **What is their computer background? -> R6**

Answers:

- **"**The users in this are the investigators, case managers and the employees."
- **"**Most of the users come from legal studies and administration educational background.**"**
- "Users might not be really adept in technology, but they have experience in working with case management software and databases."

4. Recap of Understanding

Questions:

- **Does this adequately represents the problem you are facing with your existing solution? -> R7**

Expected Answer:

- "Yes, it does as the lack of collaboration is the basic problem."

5. The Analyst's Input on Customer's Problem

Questions:

- **What are the reasons for this problem? ->R8**
- **How do you currently solve the problem? ->R9**

Answers:

- "The problem exists because while the current system lacks integration between departments, the issue goes beyond just delays and coordination. Each department operates with its own set of processes and data, which makes it challenging to foster collaboration. In fact, some departments might be resistant to a more centralized system, as they feel their independent workflows are more efficient. This reluctance to change, coupled with the lack of integration, makes it harder to synchronize efforts and leads to inefficiencies in the overall system. Therefore, the main reasons are both absence of integration plus reluctance to change."

- **“**The current solution requires each department to submit their reports by hand, which introduces delays in data transfer, retrieval and even cause delay in critical information transfer and at the very same time the un- coordination among the departments arise because of this which makes integration an ideal solution.**”**

6. Assessing Your Solution (If Possible)

Question:

- **How would you rank the importance of these? -> R10**

Expected Answer:

- "Yes, these requirements are very important, but the main focus is how quickly the work is completed. The fast transfer of data, with or without its security, is very important."

7. Assessing the Opportunity

Questions:

- **Who in your organization needs this solution? -> R11**

Answer:

- “The employees including legal experts and investigators all need this.”

8. Assessing the Reliability, Performance, and Support Needs

Questions:

- **How will the software be distributed? -> R12**

Expected Answer:

“A cloud- based transfer is what I expect to be best.”

9. Other Requirements

Questions:

- **Can you think of any other requirement we should know? -> R13**

Expected Answer:

- "No, I do not think any other requirement is actually needed."

10. Wrap Up

Question:

- **If I need to ask you anything will be willing to take part in requirements review? -> R14**

ANSWER:

- "Yes as a stakeholder I am willing to give my feedback."

11. The Analyst's Summary Statement:

In this the main focus is that besides integration the reluctant to change is also a major issue for this problem to occur, so besides integration we have to work on the organization's behavior too**.**

REQUIREMENT	R1	R2	R3	R4	R5	R6	R7	R8	R9	R10	R11	R12	R13	R14
